**Small spill:** Clean up all spills immediately.

- Avoid breathing vapors and contact with skin and eyes.
- Control personal contact with the substance, by using protective equipment.
- Contain and absorb spill with sand, earth, inert material or vermiculite.
- Wipe up, Place in a suitable, labeled container for waste disposal.

**Large spill:** Clear area of personnel and move upwind.

- Alert Fire Department and tell them location and nature of hazard.

### 8.2 Exposure controls

**Appropriate engineering controls:** General exhaust is adequate under normal operating conditions. Local exhaust ventilation may be required in specific circumstances. If risk of overexposure exists, wear approved respirator. Correct fit is essential to obtain adequate protection. Provide adequate ventilation in warehouse or closed storage areas.

### Individual protection measures

**Hygiene measures:** Wash hands before eating, smoking and using the lavatory and at the end of the working period. When using, do not eat or drink. When using, do not smoke.

**Eye/face protection:** For normal conditions, once diluted to use as per instructions, may use without safety glasses. Where there is reasonable probability of liquid contact, wear splash-proof goggles

**Skin protection:** Avoid prolonged or repeated skin contact. Impervious gloves such as nitrile, neoprene or rubber are recommended.

**Hand protection:** Gloves Recommended. The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

**Body protection:** Acid resistant protective clothing, rubber boots

**Other skin protection:** Clean up of spills may require clothing protection

**Environmental exposure controls:** Limitation and supervision of exposure into the environment. Avoid discharging full concentrate into municipal wastewater, surface water or soils, when such discharges are expected to cause significant pH changes.

Regular control of the pH value previous to or during discharges into open waters is required. Discharges should be carried out as to minimize pH changes in receiving surface waters. In general most aquatic organisms can tolerate pH values in the range of 6-9.
