

How To Wear An ESD Heel Strap

Step 1.

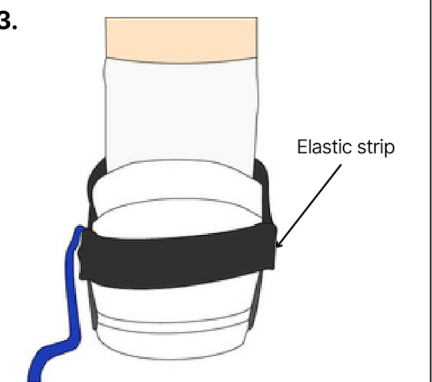

1. Position the heel strap around the shoe and place the grounding ribbon inside the shoe so that it will lay under the heel.

Step 2.

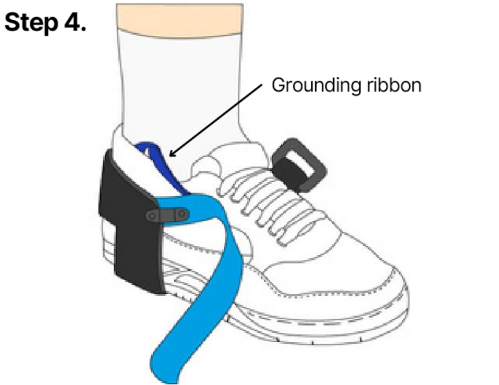

2. Adjust the conductive rubber strip so that it is placed under the heel grip of the shoe.

Step 3.

3. Make sure the elastic strip is placed around the back of the shoe and feels secure.

Step 4.

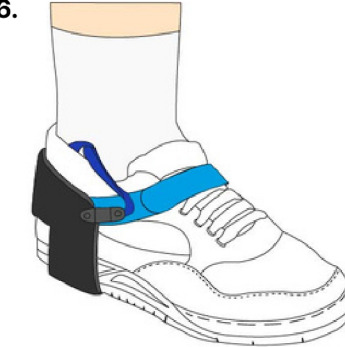

4. Once the foot is positioned comfortably inside the tied shoe, tuck in any excess ribbon material into the side of the shoe.

Step 5.

5. Feed the hook and loop fastening through the plastic buckle, pull tight and press down to stick the strap in place.

Step 6.

6. Check the heel strap for a secure and snug fit. Then, test each heel strap to confirm proper installation.
